Warranty
The warranty card is supplied as a separate document.
In case of any queries, refer to the brand website of your display or system: www.lowrance.com.

Internet usage
Some features in this product use an internet connection to perform data downloads and uploads. Internet usage via a connected mobile/cell phone internet connection or a pay-per-MB type internet connection may require large data usage. Your service provider may charge you based on the amount of data you transfer. If you are unsure, contact your service provider to confirm rates and restrictions.
**Regulatory statements**

This equipment is intended for use in international waters as well as coastal sea areas administered by the USA, and countries of the E.U. and E.E.A.

This equipment complies with:

- CE under 2014/53/EU Directive
- The requirements of level 2 devices of the Radio communications (Electromagnetic Compatibility) standard 2008
- Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The relevant Declaration of conformity is available on the following website: www.lowrance.com.

**About this manual**

This manual is a reference guide for operating the ELITE Ti. It assumes that all equipment is installed and configured, and that the system is ready to use.

The manual assumes that the user has basic knowledge of navigation, nautical terminology and practices.

Important text that requires special attention from the reader is emphasized as follows:

> **Note:** Used to draw the reader’s attention to a comment or some important information.

> **Warning:** Used when it is necessary to warn personnel that they should proceed carefully to prevent risk of injury and/or damage to equipment/personnel.

**Manual version**

This manual is written for software version 2.0. The manual is continually updated to match new software releases. The latest

**Viewing the manual on the screen**

The PDF viewer included in the unit makes it possible to read the manuals and other PDF files on the screen. Manuals can be downloaded from www.lowrance.com.

The manuals can be read from a card inserted in the card reader or copied to the unit’s internal memory.

→ **Note:** The rename and delete options, when selecting files under My files, are only available on the 5” unit.

Use the menu options or the keys and on-screen buttons to maneuver in the PDF file as described below:

- Search, Goto page, Page Up and Down
  Select the relevant panel button.
- Scroll pages
  Drag finger on the screen in any direction.
- Panning on the page
  Drag finger on the screen in any direction.
- Zoom In/Out
  Key operation: Use the + and - keys.
- Exit the PDF viewer
Select the X in the upper right corner of the panel.

**The Software version**

The software version currently on this unit can be found in the About dialog. The About dialog is available in the System Settings. For more information, refer to "About" on page 109. For upgrading your software, refer to "Software upgrades" on page 114.
# Contents

## 13 Introduction
- Front controls
- The Home page
- Application pages
- Power-Pole anchors

## 19 Basic operation
- System Controls dialog
- Turning the system on and off
- Display illumination
- Locking the touchscreen

120 Touchscreen operation
Introduction

Front controls

1. Touch screen
2. Pages
3. Zoom out / Zoom in (combined press = MOB)
4. New waypoint (long press = Find dialogue)
5. Power button
   Press and hold to turn the unit ON/OFF.
   Press once to display the System Controls dialog.
6. Card reader (behind logo)
The Home page

The **Home** page is accessed from any operation by a short press on the **Pages** key.

1. **Tools**
   Select a button to access dialogs used for carrying out a task, or for browsing stored information.

2. **Local time** and **Water depth**

3. **Applications**
   Select a button to display the application as a full page panel.
   Press and hold a button to display pre-configured split page options for the application.

4. **Close button**
   Select to exit the **Home** page and return to the previous active page.

5. **Favorites**
   Select a button to display the panel combination.
   Press and hold a favorite button to enter edit mode for the Favorites panel.
Application pages

Each application connected to the system is presented on panels. The application can be presented as a full page, or in combination with other panels in a multiple panel page.

All application pages are accessed from the Home page.

1 Application panel
2 Menu
Panel specific menu.
3 System Controls dialog
Quick access to basic system settings. Display the dialog by a short press on the Power key.
4 Dialog
Information to or input from the user.
5 Alarm message
Displayed if dangerous situations or system faults occur.

Split pages
You can have up to 4 panels on each page.
Panel sizes in a split page can be adjusted from the System Controls dialog.

**Quick split pages**

Each full screen application has several pre-configured **quick split** pages, featuring the selected application combined with each of the other panels.

*Note:* The number of quick split pages cannot be changed, and the pages cannot be customized or deleted.

Access a **quick split** page by pressing and holding the application button on the Home page.

**Favorite pages**

All preconfigured favorite pages can be modified and deleted, and you can create your own. You can have a total of 12 favorite pages. For more information, refer to "Adding new favorite pages" on page 26.

**Power-Pole anchors**

Power-Pole anchors, which can be controlled by the C-Monster Control System installed on your boat, can be controlled from the ELITE Ti. To control the Power-Poles, you **pair** the Power-Poles with the ELITE Ti using Bluetooth wireless technology available in both products.

**Power-Pole controls**

When Power-Poles are paired with the ELITE Ti, the Power-Pole button becomes available in the System Controls dialog. Select it to display the Power-Pole controller.

For pairing Bluetooth devices, refer to "Pairing Bluetooth devices" on page 93. If you are pairing dual Power-Poles, also review "Pairing with dual Power-Poles" on page 94.
When the Power-Pole controller is opened, the system connects to paired Power-Poles. When the connection is confirmed the control buttons are enabled.

→ **Note:** The controls are grayed out until the system connects with the Power-Poles. Once connected and functional the arrows in the dialog turn white.

The Power-Pole controller displays control buttons for each Power-Pole that is paired to the ELITE Ti. Single press the Auto buttons to raise and lower the Power-Poles automatically all the way up and down. The manual up and down buttons raise and lower them as quickly, and as high or low as you want.

![Single Power-Pole controller](image1)

![Dual Power-Poles controller](image2)

On a dual controller you can raise and lower the Power-Poles separately, or press the sync (links) button to allow for control of both with a single press of the auto buttons or the manual up and down buttons.

**Stay connected**

Select the Stay connected (cog) button on the Power-Pole controller to open the Power-Pole settings dialog where you can select to stay connected to all paired Power-Pole anchors.

→ **Note:** Selecting to **Stay connected** speeds up access to the controls, but the anchors cannot be controlled from another display when it is selected. Turn off this option to allow connection from other displays.
Basic operation

System Controls dialog
The System Controls dialog provides quick access to basic system settings. You display the dialog by making a short press on the Power key.

Activating functions
Select the icon of the function you want to set or toggle on or off. For those functions that toggle on and off, an orange bar across the top of the icon indicates the function is activated, as shown in the Data Overlay icon above.

Turning the system on and off
You turn the system on and off by pressing and holding the Power key. You can also turn the unit off from the System Controls dialog.
If the Power key is released before the shut-down is completed, the power off process is cancelled.

Standby mode
In Standby mode, the Sonar and the backlight for screen and keys are turned off to save power. The system continues to run in the background.
You select Standby mode from the System Controls dialog.
Switch from Standby mode to normal operation by a short press on the Power key.
Display illumination

Brightness
The display backlighting can be adjusted at any time from the System Controls dialog.
You can also cycle the preset backlight levels by short presses on the Power key.

Night mode
The night mode option optimizes the color palette and backlight for low light conditions.

> Note: Details on the chart may be less visible when the Night mode is selected!

Locking the touchscreen
You can temporarily lock a touchscreen to prevent accidental operation of the system. Lock the touchscreen when large amounts of water are on the screen, for example, in heavy seas and weather. This feature is also useful when cleaning the screen while the unit is turned on.

When the touch lock is active you can only operate the unit from the keys.
You lock the touchscreen from the System Controls dialog.
You remove the lock function by a short press on the Power key.

Using menus and dialogs

Menus
The menu is used to operate the system and to adjust settings.
• Activate a menu item and toggle on/off an option by selecting it
• Adjust a slide bar value by either:
  - dragging the slide bar
  - selecting the + or - icons

Select the Back menu option to return to the previous menu level, and then exit.
Page menus can be hidden to allow pages to be a full screen view. To hide the menu, drag the menu to the right.
When you hide a menu on one page, the menu on other pages is also hidden. To display the menu again, select the menu option.

The status of the cursor (active vs. inactive) changes the menu options.

**Dialog boxes**

Numeric and alphanumeric keyboards are automatically displayed when required for entering user information in dialogs.

A dialog is closed by saving or cancelling the entry.

A dialog can also be closed by selecting the X in the dialog's upper right corner.

**Selecting pages and panels**

**Selecting a page**

- Select a full page panel by selecting the relevant application button on the **Home** page
- Select a favorite page by selecting the relevant favorite button
- Select a predefined split panel by pressing and holding the relevant application icon

**Select active panel**

In a multiple panel page, only one panel can be active at a time. The active panel is outlined with a border.

You can only access the page menu of an active panel.

You activate a panel by tapping it.

**Using the cursor on the panel**

The cursor can be used to measure a distance, to mark a position, and to select items.
By default, the cursor is not shown on the panel.
Position the cursor by tapping the desired location on the screen.
When the cursor is active, the cursor position window is displayed.
To remove the cursor and cursor elements from the panel, select the **Clear cursor** option.

**GoTo cursor**
You can navigate to a selected position on the image by positioning the cursor on the panel, then using the **Goto Cursor** option in the menu.

**The Cursor assist function**
The cursor assist function allows for fine tuning and precision placement of the cursor without covering details with your finger.
Press and hold your finger on the screen to switch the cursor symbol to a selection circle, appearing above your finger.
Without removing your finger from the screen, drag the selection circle over the desired item to display item information.
When you remove your finger from the screen the cursor reverts to normal cursor operation.

**Measuring distance**
The cursor can be used to measure the distance between your vessel and a selected position, or between 2 points on the chart panel.

1. Position the cursor on the point from where you want to measure the distance. Start the measure function from the menu
- The measuring icons appear with a line drawn from the vessel center to the cursor position, and the distance is listed in the cursor information window.

2. You can reposition the measuring points by dragging either icon as long as the measuring function is active.

⇒ Note: The bearing is always measured from the grey icon to the blue icon.

You can also start the measuring function without an active cursor. Both measuring icons are then initially located at the vessel position. The grey icon follows the vessel as the vessel moves, while the blue icon remains at the position given when you activated the function. You terminate the measuring function by selecting the Finish measuring menu option.

Creating a Man Overboard waypoint

If an emergency situation should occur, you can save a Man Overboard (MOB) waypoint at the vessel’s current position by pressing the Zoom In (+) and Zoom out (-) keys simultaneously. When you activate the MOB function the following actions are automatically performed:

• a MOB waypoint is created at the vessel’s position
• the display switches to a zoomed chart panel, centered on the vessel’s position
• the system displays navigation information back to the MOB waypoint

Multiple MOB waypoints are saved by repeatedly pressing the MOB buttons. The vessel continues to show navigation information to the initial MOB waypoint. Navigation to subsequent MOB waypoints needs to be done manually.

Cancel navigation to MOB

The system continues to display navigational information towards the MOB waypoint until you cancel the navigation from the menu.

Display MOB waypoint information

You can display MOB information by selecting the MOB waypoint and then the MOB waypoint pop-up.
The MOB waypoint menu option
When an MOB waypoint is activated, you can use the Waypoint MOB menu option to:
- Move it on the panel
- Edit its attributes
- Delete it
- Goto it

When you select the Edit menu option the Edit Waypoint dialog opens.

Screen capture
Simultaneously press the Pages and Power keys to take a screen capture. Screen captures are saved to internal memory.
To view files, refer to "Files" on page 111.
Customizing your system

Customizing the Home page wallpaper
The Home page's wallpaper can be customized. You can select one of the pictures included with the system, or you can use your own picture in .jpg or .png format.

The images can be available on any location that can be seen in the files browser. When a picture is chosen as the wallpaper, it is automatically copied to the Wallpaper folder.

Adjusting panel size
You can change the panel size for an active split page. The panel size can be adjusted for both favorite pages and for predefined split pages.

1. Activate the System Controls dialog
2. Select the adjust splits option in the dialog
3. Adjust the panel size by dragging the adjustment icon
4. Confirm your changes by tapping one of the panels or selecting the save option in the menu.
Data Overlay

You can have data information as overlay on a page. The information can be any data available on the network.

Turning Data overlay on and off

You can turn overlay data on or off for any active page by selecting the Data overlay icon on the System Controls dialog. When Data overlay is on, an orange bar appears above the icon.

Edit overlay data

Use the Edit overlay option on the System Controls dialog to access edit menu options to:

- Add a new data overlay to the active panel.
- Delete a selected data overlay.
- Change a selected data overlay to display different data.
- Configure a selected data overlay appearance (digital or analog, size, etc).
- Re-locate an item by selecting and moving it.

Adding new favorite pages

1. Select the New icon in the favorite panel on the Home page to open the page editor dialog.
2. Drag and drop page icons to set up a new page.
3. Change the panel arrangement (only possible for 2 or 3 panels), if required.
4. Save the page layout.

The system displays the new favorite page, and the new page is included in the list of favorite pages on the Home page.

**Edit favorite pages**

1. Select the edit icon in the Favorite panel:
   - Select the X icon on a favorite icon to remove the page
   - Select the tool icon on a favorite icon to display the page editor dialog
2. Add or remove panels in the page editor dialog
3. Save or discard your changes to leave the favorite edit mode.
Charts

The chart function displays your vessel’s position relative to land and other chart objects. On the chart panel you can plan and navigate routes, place waypoints, and display AIS targets. You can also overlay a StructureScan image.

The Chart panel

1. Waypoint*
2. Vessel with extension line (extension line is optional)
3. Route*
4. North indicator
5. Grid lines*
6. Range rings*
7. Trail*
8. Chart range scale
9. Range rings interval (only displayed when Range rings are turned on)
* Optional chart items. You turn the optional chart items on/off individually from the Chart settings dialog.

## Chart data

The system is delivered with different embedded cartography depending on region.

All units support Insight charts from Navico including Insight Genesis. The system also supports charts from Navionics and C-MAP as well as content created by a variety of third party mapping providers in the AT5 format. For a full selection of available charts, visit www.gofreeshop.com, www.c-map.com, or www.navionics.com.

- **Note:** In this manual, all possible chart menu options are described. These options vary depending on the chart you are using.
- **Note:** Insight charts are referred to as Lowrance in the menu.
- **Note:** The system does not automatically switch to embedded cartography if the chart card is removed. A low-resolution chart will be displayed until you re-insert the card or manually switch back to the embedded cartography.

## Selecting chart type

You specify the chart type in the Chart panel by selecting one of the available chart types in the chart source menu option.

## Vessel symbol

When the system has a valid GPS position lock, the vessel symbol indicates vessel position. If no GPS position is available, the vessel symbol includes a question mark.

- **Note:** Without a heading sensor on the network, the vessel icon orientates itself using COG (Course over Ground).

## Chart scale

You zoom in and out on the chart by using the zoom (+ or -) buttons or the + and - keys.
Chart range scale and range rings interval (when turned on) are shown in the lower right corner of the chart panel.

**Panning the chart**
You can move the chart in any direction by dragging your finger on the screen.
Select the **Clear cursor** menu option to remove the cursor and cursor window from the panel. This also centers the chart to the vessel position.

**Positioning the vessel on the chart panel**

**Chart orientation**
Several options are available for how the chart is rotated in the panel. The chart orientation symbol in the panel’s upper right corner indicates the north direction.

- **North up**
  Displays the chart with north upward.

- **Heading up**
  Displays the chart with the vessel’s heading directed upward. Heading information is received from a compass. If heading is not available, then the COG from the GPS is used.

- **Course up**
  Displays the chart with the direction the vessel is ACTUALLY traveling directed upward, which in some cases is not the direction the vessel is headed.

- **Look ahead**
  Moves the vessel icon closer to the bottom of the screen so that you can maximize your view ahead.
Displaying information about chart items

When you select a chart item, a waypoint, a route, or a target, basic information for the selected item is displayed. Select the chart item’s pop-up to display all available information for that item. You can also activate the detailed information dialog from the menu.

→ **Note:** If you are viewing applicable C-MAP charts on your system, you can select marine objects to display information about services and available multimedia (photos) associated with the location or object.

→ **Note:** Pop-up information has to be enabled in chart settings to see basic item information.

Using the cursor on the chart panel

By default, the cursor is not shown on the chart panel. When you activate the cursor, the cursor position window is displayed. When the cursor is active, the chart does not pan or rotate to follow the vessel.

Select the **Clear cursor** menu option to remove the cursor and the cursor window from the panel. This also centers the chart to the vessel position.

Select the **Restore cursor** menu option to display the cursor in its previous location. The **Clear cursor** and **Restore cursor** options are useful features for toggling between the vessel’s current location and the cursor position.

Creating routes

You can create routes as follows on the chart panel.
1. Position the cursor on the chart panel
2. Select New followed by New route in the menu
3. Continue positioning the remaining routepoints
4. Save the route by selecting the save option in the menu.

→ Note: For more information, refer to "Waypoints, Routes, and Trails" on page 45.

**Find objects on chart panels**

You can search for other vessels or various chart items from a chart panel.

Activate the cursor on the panel to search from the cursor position. If the cursor is not active, the system searches for items from the vessel’s position.

→ Note: You must have an AIS receiver connected to search for vessels.

**3D charts**

The 3D option provides a three dimensional graphical view of land and sea contours.

→ Note: All chart types work in 3D mode, but without 3D cartography for the appropriate area the chart appears flat.

When the 3D chart option is selected, the Pan and the Rotate icons appear on the chart panel.

**Panning the 3D chart**

You can move the chart in any direction by selecting the Pan icon and then panning in the desired direction.
Select the **Return to vessel** menu option to stop panning, and to center the chart to vessel position.

**Controlling the view angle**
You can control the view angle by selecting the Rotate icon and then panning the chart panel.

- To change the direction you are viewing, pan horizontally
- To change the tilt angle of the view, pan vertically

→ **Note:** When centered on the vessel position, only the tilt angle can be adjusted. The view direction is controlled by the chart orientation setting. See "*Positioning the vessel on the chart panel*" on page 30.

**Zooming a 3D chart**
You zoom in and out on a 3D chart by using the zoom (+ or -) buttons or by using the + and - keys.

**Chart overlay**
Structure (StructureMap) information can be displayed as overlay on your chart panel.

When an overlay is selected, the chart menu expands to include basic menu functions for the selected overlay.

For more information about the StructureMap menu functions, refer to "*Structure options*" on page 78.

**Insight and C-MAP charts**
All possible menu options for Insight and C-MAP charts are described below. The features and menu options available can vary depending on the charts you use. This section shows menus from an Insight chart.

→ **Note:** A menu option is greyed out if it is not available on the chart displayed. For example, raster charts are not available with Insight, so the Raster charts menu option is greyed out when Insight charts are displayed.
Insight and C-MAP tides and currents

The system can display Insight and C-MAP tides and currents. With this information it is possible to predict the time, level, direction and strength of currents and tides. This is an important tool when considering planning and navigation of a trip.

In large zoom ranges the tides and currents are displayed as a square icon including the letter T (Tides) or C (Current). When you select one of the icons, tidal or current information for that location are displayed.

Dynamic current data can be viewed by zooming inside a 1-nautical mile zoom range. At that range, the Current icon changes to an animated dynamic icon that shows the speed and direction of the current. Dynamic icons are colored in black (greater than 6 knots), red (greater than 2 knots and less than or equal to 6 knots), yellow (greater than 1 knot and less than or equal to 2 knots) or green (equal to or less than 1 knot), depending on the current in that location.

If there is no current (0 knots) this will be shown as a white, square icon.
**Insight and C-MAP specific chart options**

Orientation, Look ahead, 3D, and change Chart source (previously described in this section) are common for all chart types.

**Presentation**

The charts can be displayed in different imagery styles.

- **Shaded relief**
- **No contours**
- **Raster imagery**
- **High resolution bathymetry**
Shaded relief
Shades seabed terrain.

No contours
Removes contour lines from the chart.

Raster charts
Changes the view to that of a traditional paper chart.

Raster transparency
Controls the transparency of raster imagery.

High resolution bathymetry
Enables and disables higher concentration of contour lines.

**Insight and C-MAP view options**

Chart detail
- **Full**
  All available information for the chart in use.
- **Medium**
  Minimum information sufficient for navigation.
- **Low**
  Basic level of information that cannot be removed, and includes information that is required in all geographic areas. It is not intended to be sufficient for safe navigation.

Insight and C-MAP chart categories
Insight and C-MAP charts include several categories and sub-categories that you can turn on/off individually depending on which information you want to see.

Photo overlay
Photo overlay enables you to view satellite photo images of an area as an overlay on the chart. The availability of such photos is limited to certain regions, and cartography versions.
You can view photo overlays in either 2D or 3D modes.
**Photo transparency**
The Photo transparency sets the opaqueness of the photo overlay. With minimum transparency settings the chart details are almost hidden by the photo.

**Depth palette**
Controls the Depth palette used on the map.

**Paper chart**
Changes the appearance of the map to a paper chart style.

**Safety depth**
Insight and C-MAP charts use different shades of blue to distinguish between shallow (lighter shades) and deep (darker shades) water. After enabling Safety depth, specify the desired safety depth limit. The Safety depth sets the limit at which depths will be drawn without blue shading.

**Depth filter**
Filters out depth values shallower than the selected depth filter limit.
Shading
Shades different areas of the seabed, depending on the selected Shading category.

→ **Note:** Composition and Vegetation shading are not applicable to C-MAP charts.

Depth 1 and Depth 2
Depth presets that shade different depths in different colors.

Custom
You can adjust the depth threshold, color and opacity (transparency) of color shading for Depth 1 and Depth 2.

![Custom Shading](image)

3D exaggeration
Graphical settings that are available in 3D mode only. Exaggeration is a multiplier applied to the drawn height of hills on land, and troughs in water to make them look taller or deeper.

→ **Note:** This option is grayed out if the data is not available in the map card inserted.

**Navionics charts**
Navionics specific chart options
Orientation, Look ahead, 3D and change Chart source (previously described in this section) are common for all chart types.

Community edits
Toggles on the chart layer including Navionics edits. These are user information or edits uploaded to Navionics Community by users, and made available in Navionics charts.

For more information, refer to Navionics information included with your chart, or to Navionics website: www.navionics.com.

Navionics chart settings

Colored seabed areas
Used for displaying different depth areas in different shades of blue.

Annotation
Determines what area information, such as names of locations and notes of areas, is available to display.

Presentation type
Provides marine charting information such as symbols, colors of the navigation chart and wording for either International or U.S. presentation types.

Chart details
Provides you with different levels of geographical layer information.

Safety depth
The Navionics charts use different shades of blue to distinguish between shallow and deep water.

Safety depth, based on a selected limit, is drawn without blue shading.

Note: The built in Navionics database features data down to 20 m, after which it is all white.
Contours depth
Determines which contours you see on the chart down to the selected safety depth value.

Rock filter level
Hides rock identification on the chart beneath a given depth.
This helps you to declutter charts in areas where there are many rocks located at depths well below your vessel’s draught.

Navionics view options

Chart shading
Shading adds terrain information to the chart.

Navionics dynamic tide and current icons
Shows tides and currents with a gauge and an arrow instead of the diamond icons used for static tides and current information.
The tide and current data available in Navionics charts are related to a specific date and time. The system animates the arrows and/or gauges to show the tides and currents evolution over time.

The following icons and symbology are used:
Current speed
The arrow length depends on the rate, and the symbol is rotated according to flow direction. Flow rate is shown inside the arrow symbol. The red symbol is used when current speed is increasing, and the blue symbol is used when current speed is decreasing.

Tide height
The gauge has 8 labels and is set according to absolute max/min value of the evaluated day. The red arrow is used when tide is rising, and the blue arrow is used when tide is falling.

→ **Note:** All numeric values are shown in the relevant system units (unit of measurement) set by user.

Easy View
Magnifying feature that increases the size of chart items and text.

→ **Note:** There is no indication on the chart showing that this feature is active.

Photo overlay
Photo overlay enables you to view satellite photo images of an area as an overlay on the chart. The availability of such photos is limited to certain regions, and cartography versions.

You can view photo overlays in either 2D or 3D modes.

Photo transparency
The Photo transparency sets the opaqueness of the photo overlay. With minimum transparency settings the chart details are almost hidden by the photo.
Navionics Fish N’ Chip
The system supports Navionics Fish N’ Chip chart feature. For more information, see www.navionics.com.

Depth highlight range
Select a range of depths between which Navionics fills with a different color. This allows you to highlight a specific range of depths for fishing purposes. The range is only as accurate as the underlying chart data, meaning that if the chart only contains 5 meter intervals for contour lines, the shading is rounded to the nearest available contour line.

Shallow water highlight
Highlights areas of shallow water. This allows you to highlight areas of water between 0 and the selected depth (up to 10 meters/30 feet).
Chart settings
Settings and display options made in the Chart settings page are common for all chart panels.

3D boat selection
Determines which icon to use on 3D charts.

Boat settings
Not used.

Range Rings
The range rings can be used to present the distance from your vessel to other chart objects.
The range scale is set automatically by the system to suit the chart scale.

**Extension lines**
Sets the lengths of the heading and course extension lines for your vessel. For setting extension line lengths on other vessels shown as AIS targets, refer to AIS "Course extension lines" on page 103 lines.

A: Heading

B: Course Over Ground (COG)

The lengths of the extension lines are either set as a fixed distance, or to indicate the distance the vessel moves in the selected time period. If no options are turned on for the vessel then no extension lines are shown for your vessel.

Your vessel heading is based on information from the active heading sensor and the COG is based on information from the active GPS sensor.

**Synchronize 2D/3D chart**
Links the position shown on one chart with the position shown on the other chart when a 2D and a 3D chart are shown side by side.

**Pop-up information**
Selects whether basic information for chart items is displayed when you select the item.

**Grid lines**
Turns on/off viewing of longitude and latitude grid lines on the chart.

**Hide chart**
If the option is set to ON when viewing a Lowrance chart, the chart (background) is not displayed and only the vessel, extensions, waypoints, and routes are displayed on a white background.

**Waypoints, Routes, Trails**
Turns on/off displaying of these items on chart panels. Also opens the Waypoints, Routes and Trails dialogs you can use to manage them.
Waypoints, Routes, and Trails dialogs

The Waypoints, Routes, and Trails dialogs give access to advanced edit functions and settings for these items. The dialogs are accessed from the Tools panel on the Home page.

Waypoints

A waypoint is a user generated mark positioned on a chart, or on the Sonar image. Each waypoint has an exact position with latitude and longitude coordinates. A waypoint positioned on the Sonar image has a depth value, in addition to position information. A waypoint is used to mark a position you later may want to return to. Two or more waypoints can also be combined to create a route.
**Saving waypoints**

You can save a waypoint at a selected location by positioning the cursor on the panel, and then selecting the new waypoint option in the menu.

You can also save a waypoint by pressing the Waypoint key:
- Press once to display the New Waypoint dialog
- Press twice to quickly save a waypoint. If the cursor is active, the waypoint is saved at the cursor position. If the cursor is not active, the waypoint is saved at your vessel’s position.

**Moving a waypoint**

1. Select the waypoint you want to move. The waypoint icon expands to indicate that it is active.
2. Activate the menu and select the waypoint in the menu
3. Select the move option
4. Select the new waypoint position
5. Select Finish in the menu.

The waypoint is now automatically saved at the new position.

**Edit a waypoint**

You can edit all information about a waypoint from the **Edit Waypoint** dialog.

The dialog can also be accessed from the Waypoints tool on the **Home** page.
Delete a waypoint
You can delete a waypoint from the Edit Waypoint dialog or by selecting the Delete menu option when the waypoint is activated. You can also delete waypoints from the Waypoints tool on the Home page.
You can delete MOB waypoints the same way.

Waypoint alarm settings
You can set an alarm radius for each individual waypoint you create. The alarm is set in the Edit Waypoint dialog.

→ Note: The waypoint radius alarm must be toggled ON in the alarm dialog to activate an alarm when your vessel comes within the defined radius. For more information, refer to "Alarms dialog" on page 105.

Routes
A route consists of a series of routepoints entered in the order that you want to navigate them.
When you select a route on the chart panel it turns green, and the route name is displayed.

Creating a new route on the chart panel
1. Activate the cursor on the chart panel
2. Select the new route option from the menu
3. Position the first waypoint on the chart panel
4. Continue positioning new routepoints on the chart panel until the route is completed
5. Save the route by selecting the save option in the menu.
Edit a route from the chart panel
1. Select the route to make it active.
2. Select the route edit option in the menu.
3. Position the new routepoint on the chart panel:
   - If you set the new routepoint on a leg, a new point is added between existing routepoints.
   - If you set the new routepoint outside the route, the new routepoint is added after the last point in the route.
4. Drag a routepoint to move it to a new position.
5. Save the route by selecting the save option in the menu.

→ Note: The menu changes depending on the selected edit option. All edits are confirmed or cancelled from the menu.

Delete a route
You can delete a route by selecting the Delete menu option when the route is activated. You can also delete routes from the Routes tool on the Home page.

Creating routes using existing waypoints
You can create a new route by combining existing waypoints from the Routes dialog. The dialog is activated by using the Routes tool on the Home page.
**Converting Trails to Routes**

You can convert a trail to a route from the Edit Trail dialog. The dialog is activated by activating the trail, then selecting the trail's pop-up, or the *Trail* menu option.

The Edit Trails dialog can also be accessed by selecting the Trails tool on the *Home* page.

![Edit Trail dialog](image)

**The Edit Route dialog**

You can add and remove routepoints from the *Edit Route* dialog. This dialog is activated by selecting an active route's pop-up or from the menu.

The dialog can also be accessed by using the *Routes* tool on the *Home* page.

![Edit Route dialog](image)
Trails

Trails are a graphical presentation of the historical path of the vessel, allowing you to retrace where you have travelled. Trails can be converted to routes from the Edit dialog.

From the factory, the system is set to automatically track and draw the vessel’s movement on the chart panel. The system continues to record the Trails until the length reaches the maximum points, and then automatically begins overwriting the oldest points.

The automatic tracking function can be turned off from the Trails dialog.

Creating new Trails

You can start a new trail from the Trails dialog, activated by using the Trails tool on the Home page.

Trails settings

Trails are made up of a series of points connected by line segments whose length depends on the frequency of the recording.

You can select to position trail points based on time settings, distance, or by letting the system position a waypoint automatically when a course change is registered.

⇒ Note: The Trails option must also be turned ON in the chart settings to be visible.
Navigating

The navigation function included in the system allows you to navigate to the cursor position, to a waypoint, or along a predefined route.

If autopilot functionality is included in your system, the autopilot can be set to automatically navigate the vessel.

For information about positioning waypoints and creating routes, refer to "Waypoints, Routes, and Trails" on page 45.

Steer panel

The Steer panel can be used to display information when you are navigating. It is activated from the Home page, either as a full page panel or as part of a multiple panel page.

1. Data fields
2. Vessel heading
3. Bearing to waypoint
4. Destination point
5 Bearing line with allowed off course limit
When travelling on a route the bearing line shows the intended course from one waypoint towards the next. When navigating towards a waypoint (cursor position, MOB, or an entered latitude and longitude position), the bearing line shows the intended course from the point at which navigation was started towards the waypoint.

6 Vessel symbol
Indicates distance and bearing relative to the intended course. If the XTE (Cross Track Error) exceeds the defined XTE limit, this is indicated with a red arrow including the distance from the track line.

Data Fields
The Steer panel provides the following information:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>XTE</td>
<td>Cross track error</td>
</tr>
<tr>
<td>SOG</td>
<td>Speed over ground</td>
</tr>
<tr>
<td>COG</td>
<td>Course over ground</td>
</tr>
<tr>
<td>POS</td>
<td>Position</td>
</tr>
<tr>
<td>DTD</td>
<td>Distance to destination</td>
</tr>
<tr>
<td>TTD</td>
<td>Time to destination</td>
</tr>
</tbody>
</table>

Navigate to cursor position
Position the cursor at the selected destination on the panel, and then select the **Goto Cursor** option in the menu.

→ **Note:** The Goto Cursor menu option is not available if you are already navigating.

Navigate a route
When route navigation is started, the menu expands and shows options for canceling the navigation, for skipping a waypoint, and for restarting the route from current vessel position.
Starting a route from the chart panel
Activate a route on the panel, and then select the route navigation option from the menu.
You can select a routepoint to start navigating from a selected position.

Starting a route from the steer panel
Select the start route option on the menu, and then details from the dialogs.

Start navigating a route from the Route dialog
You can start navigating from the Route dialog, activated by:
• Selecting the Route tool from the Home page
• Selecting the route details from the menu

Navigating with the autopilot
Navigating with the autopilot is available with all units that have set up the trolling motor autopilot. Autopilot is not available on the ELITE-5Ti.
When you start navigation on a system with autopilot functionality, you are prompted to set the autopilot to navigation mode.
If you choose not to engage the autopilot, the autopilot can be set to navigation mode from the Autopilot Controller later on. For more information about autopilot functionality, refer to "Autopilot" on page 82.

**Navigation settings**

**Arrival radius**
Sets an invisible circle around the destination waypoint. The vessel is considered arrived at the waypoint when it is within this radius.

**XTE limit**
This setting defines how far the vessel can deviate from the selected route, if the vessel goes beyond this limit, an alarm is activated.

**XTE alarm (Cross track error)**
Turns on/off the XTE alarm.

**Trails**
Opens the Trails dialog where trails settings can be adjusted and trails can be converted into routes for navigation. Refer to "Converting Trails to Routes" on page 49.
Logging type
You can select to record trail points based on time, distance, or by letting the unit position a point automatically when a course change is registered.
Specify one of the following logging types in the Navigating Settings dialog:
  • **Auto** - the unit positions a point automatically when a course change is registered.
  • **Distance** - select the Distance field and enter the distance you want to record.
  • **Time** - select the Time field and enter the time you want to record.

Phantom Loran
Enables use of Phantom Loran positioning system.

Loran settings
Defines Loran chains (GRI) and preferred station for waypoint entry, cursor position and position panel.
The graphic example shows a cursor position window with Loran position information.
For more information refer to your Loran system documentation.
The Sonar function provides a view of the water and bottom beneath your vessel, allowing you to detect fish and examine the structure of the sea floor.

**The Sonar image**

1. Fish arches
2. History preview*
3. Temperature graph*
4. Depth at cursor
5. Amplitude scope*
6. Zoom (range) buttons
7. Water depth and Water temperature at cursor location
8. Range scale
9. Bottom

* Optional Sonar items that you turn on/off individually.
**Zooming the image**

You can zoom the image by:

- using the zoom (+ or -) buttons
- using the +/- keys

Zoom level is shown on the bottom left side of the image.
When zooming in, the sea floor is kept near the bottom of the screen, irrespective of whether it is in auto-range or manual range.
If the range is set considerably less than the actual depth, the unit is not able to find the bottom when zooming.
If the cursor is active, the unit zooms in where the cursor is pointed.

**Zoom bar**

The zoom bar is displayed when you zoom the image.
Drag the zoom bar vertically to view different parts of the water column.

**Using the cursor on the image**

The cursor can be used to measure a distance to a target, to mark a position, and to select targets.

By default, the cursor is not shown on the image.
When you position the cursor on the image; the screen pauses, the depth at the cursor position is shown, and the information window and the history bar are activated.
To remove the cursor and cursor elements from the panel, select the **Clear cursor** menu option.

**Viewing history**

Whenever the cursor is shown on the Sonar panel, the scroll bar is shown at the top of the panel. The scroll bar shows the image you are currently viewing in relation to the total Sonar image history stored.
If the scroll bar is on the far right side, it indicates that you are viewing the latest soundings. If you position the cursor to the left side of the screen, the history bar starts scrolling towards the left, and the automatic scrolling as new soundings are received is turned off.
You can view sonar history by panning the image. You can also use the preview feature to pan history, refer to "Preview" on page 65. To resume normal scrolling, select the **Clear cursor** menu option.

![Sonar image](image)

**Setting up the image**

Use the Sonar menu options to set up the image. When the cursor is active, some options on the Sonar menu are replaced with cursor mode features. Select **Clear cursor** to return to the normal Sonar menu.

**The range**

The range setting determines the water depth that is visible on the screen.

**Auto range**

By default, the range is set to Auto. With Auto, the system automatically displays the whole range from the water surface to the bottom. Auto is the preferred setting for most fish finding sonar use.

**Preset range levels**

Allows for the selection of a specific depth range that is not tied to the depth of the water.

**Custom range**

This option allows you to manually set both upper and lower range limits.
Note: Setting a custom range puts the sonar in manual mode. If the bottom is well beyond the lower range set, you may lose digital depth.

**Frequency**
The unit supports several transducer frequencies. Available frequencies depend on the transducer model that is connected.

Note: This unit cannot operate CHIRP frequencies and SideScan at the same time. If you turn on StructureScan Left/Right view, you will not be able to use the CHIRP sonar.

You can view two frequencies at the same time by selecting dual Sonar panels from the **Home** page.

**Sensitivity**
Increasing Sensitivity shows more detail on the screen. Decreasing Sensitivity displays less. Too much detail clutters the screen. Conversely, desired echoes may not be displayed if Sensitivity is set too low.

Note: Auto Sensitivity is the preferred mode for most conditions.

**Auto sensitivity**
Auto sensitivity automatically adjusts the sonar return to the optimal levels. Auto sensitivity can be adjusted (+/-) to your preference while still maintaining the auto sensitivity functionality.

**Colorline**
Allows the user to adjust the colors of the display to help differentiate softer targets from harder ones. Adjusting the Colorline can help separate fish and important structures on or near the bottom from the actual bottom.

**Adjusting Sensitivity and Colorline**
Select the Sensitivity or Colorline menu options in the Sonar menu and adjust them by dragging the bar vertically up/down. Minor adjustments can be made by tapping on the top or bottom of the slider bar.
Stop sonar
Select the **Stop sonar** menu option to stop the sonar from pinging. Use the stop sonar option anytime you want to disable the sonar but not power off the unit.

Advanced options
The Advanced option is only available when the cursor is not active.

Noise rejection
Signal interference from bilge pumps, engine vibration and air bubbles can clutter the image. The noise rejection option filters the signal interference and reduces the on-screen clutter.

Surface clarity
Wave action, boat wakes, and temperature inversion can cause onscreen clutter near the surface. The surface clarity option reduces surface clutter by decreasing the sensitivity of the receiver near the surface.

Scroll speed
You can select the scrolling speed of the image on the screen. A high scroll speed updates the image fast, while a low scroll speed presents a longer history.

- **Note:** In certain conditions it may be necessary to adjust the scroll speed to get a more useful image. Such as adjusting the image to a faster speed when vertically fishing without moving.

Ping speed
Ping speed controls the rate the transducer transmits the Sonar signal into the water. By default, the ping speed is set to max. It may be necessary to adjust the ping speed to limit interference or to adjust for specific fishing conditions.

Manual mode
Manual mode is an advanced user mode that restricts digital depth capability, so the unit only processes sonar signals in the selected
range. This allows the display to continue smooth scrolling if the bottom depth is out of transducer range. When the unit is in manual mode, you might not receive any depth readings, or you might receive incorrect depth information.

**Start recording log data**

You can start recording log data and save the file internally in the unit, or save it onto a card inserted into the unit’s card reader. The **Log sonar** dialog is activated from the **Advanced** menu option, or from the **Sonar Settings** dialog.

When the data is being recorded, there is a flashing red symbol in the top left corner and a message appears periodically at the bottom of the screen.

**Filename**

Specify the name of the recording (log).

**File format**

Select a file format from the drop-down, slg (Sonar only), xtf (DownScan only*), or sl2 (Sonar and DownScan).

→ **Note:** XTF format is for use only with select 3rd party Sonar viewing tools.
Save to
Select whether the recording is to be saved internally or to a memory card in the card reader.

Bytes per sounding
Select how many bytes per seconds that are to be used when saving the log file. More bytes yield better resolution, but cause the record file to increase in size compared to using lower byte settings.

Create StructureMap
If StructureScan is available on the network, you can convert the .sl2 logs to StructureMap format (.smf) when recording completes. The log file can also be converted to StructureMap format from the Files option.

Upload to Insight Genesis
Files are transmitted to Insight Genesis when recording completes, if you are connected to a wireless hotspot. For information about wireless hotspots, refer to "Wireless connection" on page 90.

Privacy
If allowed by your selected Insight Genesis account, you can choose between setting the recorded log files as Private or Public at Insight Genesis.

Time remaining
Shows the remaining allocated space available for recordings.

Stop recording log data
Select Stop in the Logging Sonar dialog to fully stop the recording of all sonar log data.

→ Note: If you have selected the Upload to Insight Genesis option and are connected to a wireless hotspot, your recorded files are transmitted to Insight Genesis when you select Stop.
Viewing the recorded sounder data

Both internally and externally stored sounder records may be reviewed when the view sonar log option is selected in the Sonar settings dialog. Refer to "Sonar settings" on page 66.

The log file is displayed as a paused image, and you control the scrolling and display from the replay menu option.

You can use the cursor on the replay image, and pan the image as on a normal echo image.

If more than one channel was recorded in the selected echo file, you can select which channel to display.

You exit the replay mode by selecting the X symbol in the upper right corner of the replay image.
Sonar view options

Select the View option in the Sonar menu to see View options.

Split screen options

Zoom

1  Zoom level
2  Zoom bars

The Zoom mode presents a magnified view of the sounder image on the left side of the panel. By default the zoom level is set to 2x. You can select up to 8x zoom from the drop-down menu, using the +/− keys, or the zoom (+ or -) buttons. The range zoom bars on the right side of the display shows the range that is magnified. If you increase the zooming factor the range is reduced. You see this as reduced distance between the zoom bars.

Bottom lock
The bottom lock mode is useful when you want to view echoes close to the bottom. In this mode, the left side of the panel shows an image where the bottom is flattened. The range scale is changed to measure from the seabed (0) and upwards. The bottom and the zero line are always shown on the left image, independent of the range scale. The scaling factor for the image on the left side of the panel is adjusted as described for the Zoom option.
Flasher
The Flasher mode shows a flasher-style sonar view in the left panel and a normal sonar view in the right panel.

Palettes
You can select between several display palettes optimized for a variety of fishing conditions.

Temperature graph
The temperature graph is used to illustrate changes in water temperature.
When toggled on, a colored line and temperature digits are shown on the Sonar image.

Depth line
A depth line can be added to the bottom surface to make it easier to distinguish the bottom from fish and structures.

Amplitude scope
The Amplitude scope is a display of real-time echoes as they appear on the panel. The strength of the actual echo is indicated by both width and color intensity.

Preview
You can have all available sonar history shown at the top of the sonar screen. The Preview bar is a snapshot of available sonar history. You can scroll through sonar history by dragging the
preview slider horizontally. By default, Preview is turned on when the cursor is active.

**Fish ID**
You can select how you want the echoes to appear on the screen. You can also select if you want to be notified by a beep when a fish ID appears on the panel.

![Traditional fish echoes](image1) ![Fish symbols](image2) ![Fish symbols and depth indication](image3)

→ **Note:** Not all fish symbols are actual fish.

**Sonar settings**

![Sonar settings](image4)

**Overlay downscan**
When a DownScan source is connected to your system, you can overlay DownScan images on the regular Sonar image.
When activated, the Sonar menu expands to include basic DownScan options.
Select Overlay on the Structure options menu to adjust the level of structure overlay shown on the screen. You can make adjustments using the Overlay slider bar.

**Fishing mode**
This feature consists of preset packages of sonar settings designed for specific fishing conditions.

→ **Note:** Selecting the proper fishing mode is critical to optimal sonar performance. If you completed configuration setup at initial startup, the proper fishing mode has already been selected.

<table>
<thead>
<tr>

<td>White background</td>
</tr>
</tbody>
</table>

**Reset fishing mode**
Resets selected fishing mode to default settings, allowing you to clear settings adjustments made while using a fishing mode.

**Log sonar**
Select to start and stop recording of Sonar data. For more information, refer to "Start recording log data" on page 61. This option is also available from the Advanced option in the Sonar menu.
View Sonar log
Used to view Sonar recordings. The log file is displayed as a paused image, and you control the scrolling and display from the menu. You can use the cursor on the image, measure distance, and set view options as on a live Sonar image. If more than one channel was recorded in the selected Sonar file, you can select which channel to display.
You exit the view function by selecting the X in the upper right corner.

Installation
Used for installation and setup. See the separate ELITE Ti Installation manual.
StructureScan

StructureScan HD uses high frequencies to provide a high resolution, picture-like image of the seabed. StructureScan HD provides a wide coverage in high detail with SideScan, while DownScan provides detailed images of structure and fish directly below your boat. The StructureScan page is accessed from the Home page when the TotalScan transducer is connected.

→ Note: This unit cannot operate CHIRP frequencies and SideScan at the same time. If you turn on StructureScan Left/Right view, you will not be able to use the CHIRP sonar.

The StructureScan image

The view
The StructureScan panel can be set up as a DownScan image, or showing left/right side scanning. The DownScan image can also be added as an overlay to the traditional Sonar image.
Zooming the StructureScan image
You can zoom a StructureScan image by:
• using the zoom (+ or -) buttons
• using the +/- keys

Zoom level is shown on the bottom left side of the panel.

Using the cursor on the StructureScan panel
By default, the cursor is not shown on the StructureScan image. When you position the cursor on a DownScan image, the screen pauses, the cursor information window and the history bar are activated. On a DownScan image, the depth is shown at cursor position.

When you position the cursor on a SideScan image, the screen pauses, and the cursor information window is activated. On a SideScan image, the left/right distance from the vessel to the cursor are shown at the cursor position.

To remove the cursor and the cursor elements from the panel, select the **Clear cursor** option.
Viewing StructureScan history
When the cursor is active in a DownScan view, the history bar is shown at the top of the panel.
In a SideScan view, you can pan the image to see sides and history by dragging the image left, right, and up.
To resume normal StructureScan scrolling, press **Clear cursor**.

Setting up the StructureScan image
Use the StructureScan menu to set up the image. When the cursor is active, some options in the menu are replaced with cursor mode features. Select **Clear cursor** to return to the normal menu.

**Range**
The range setting determines the water depth and SideScan range that is visible on the screen.

**Auto range**
When the range is set to Auto the system automatically sets the range depending on the water depth.
Preset range levels
You can select between several preset range levels.

StructureScan frequencies
StructureScan supports two frequencies. 455 kHz provides ideal range and image quality in most situations, while 800kHz is used to provide higher detail in shallow water.

Contrast
Determines the brightness ratio between light and dark areas of the screen.

To adjust the contrast setting:
1. Select the contrast icon or activate the contrast option in the menu to display the color adjustment bar
2. Drag the bar up or down to get the desired contrast setting or select Auto contrast.

Note: We recommend that you use Auto contrast.

Palettes
You can select between several display palettes optimized for a variety of fishing conditions.

View
You can set up the StructureScan page as a DownScan image, left only, right only, or left/right side scanning.

Stop sonar
Use the Stop sonar menu option when you want to turn off the StructureScan transducer, but not turn off the unit.
Advanced StructureScan settings

**Surface clarity**
Wave action, boat wakes and temperature inversions can cause on-screen clutter near the surface.
The surface clarity option reduces surface clutter by decreasing the sensitivity of the receiver near the surface.

→ **Note:** By default, surface clarity is set to Low, for optimal image return and clarity.

**Flipping the Structure image left/right**
If required, the left/right SideScanning images can be flipped to match the direction of the transducer installation.

**Range Lines**
Range lines can be added to the image to make it easier to estimate depth (Downscan) and distance (SideScan).

**Preview**
You can turn off sonar history preview, have it always shown at the top of the screen, or have it appear only when the cursor is active.
By default, the sonar history preview appears when the cursor is active.

**Recording StructureScan data**
You can record StructureScan data and save the file internally in the unit, or onto a memory card as described in “*Start recording sonar data*” on page 61.
The StructureMap feature overlays SideScan images from a StructureScan source on the map. This makes it easier to visualize the underwater environment in relation to your position, and aids in interpreting SideScan images.

The StructureMap image

The example below shows a chart panel with Structure overlay, combined with a traditional SideScan panel.

You move around in the chart as usual when you have a Structure overlay:

- Touch operation: zoom the chart and the scanned image by using the zoom (+ or -) buttons. Drag on the panel to view the scanned image.
- Key operation: zoom the chart and the scanned image by using the +/− keys.

Selecting the Clear cursor option removes the cursor from the panel, and the chart center is positioned at the vessel.

Activating Structure overlay

1. Turn on Structure overlay from the chart menu
   - The chart menu is increased to show Structure options
   - Structure data starts to appear on the chart screen as soon as Structure overlay is enabled
2. Select Structure source
   - Live data is default

➤ **Note:** Structure overlay can also be activated by selecting a saved StructureMap file in the files browser.

**StructureMap sources**
Two sources can be used to overlay Structure logs on the charts, but only one can be viewed at a time:

- **Live data** - Used when StructureScan data is available on the system.
- **Saved files** - These are recorded StructureScan (*.sl2) data that are converted to StructureMap (*.smf) format. Saved *.smf files can be used even if no StructureScan sources are connected.

**Live source**
When live data is selected, the SideScan imaging history is displayed as a trail behind the vessel icon. The length of this trail varies depending on available memory in the unit and range settings. As the memory fills up, the oldest data is automatically deleted as new data is added. When increasing the search range, the ping speed of the StructureScan transducer is reduced, but the width and the length of the image history is increased.

➤ **Note:** Live mode does not save any data. If the unit is turned off, all recent data is lost.

**Saved files**
When Saved files are selected, the StructureMap file is overlaid on the map based on position information in the file.

If the chart scale is large, the StructureMap area is indicated with a boundary box until the scale is large enough to show Structure details.

Saved mode is used to review and examine StructureMap files, and to position the vessel on specific points of interest on a previous scanned area.

➤ **Note:** When saved files are used as the source, all StructureMap files found on the memory card and in the system’s internal memory are displayed. If there is more than one StructureMap of the same area, the images overlap and clutter the chart. If several logs of the same area are required, the maps should be put on separate memory cards.
StructureMap tips

- To get a picture of taller structures (a wreck, etc.) — do not drive over it, instead, steer the boat so the structure is on the left or right side of your vessel.
- Do not use Autorange when using StructureScan. Set your structure range to a significantly greater level (two-to-three times) than the water depth to ensure a complete scan and to maximize conversion accuracy.
- Do not overlap history trails when conducting a side-by-side scan of an area.

Recording StructureScan data

StructureScan data can be recorded from a chart panel with Structure overlay enabled.

StructureScan recordings can also be started from a StructureScan panel.

When StructureScan data is being recorded, there is a flashing red symbol and a message appears periodically at the bottom of the screen.

⇒ Note: The message includes information about file size. Keep the size of your logs to 100MB or less to allow for faster file conversion.

The recording is stopped by re-selecting the record function.

Converting StructureScan data to StructureMap format

A StructureScan log file (.sl2) is converted to StructureMap format (.smf) after recording from the recording dialog, or from the files browser.
You can create standard or high resolution files. High resolution .smf files capture more detail, but take longer to convert and are larger than standard resolution files.

To save disc space it is recommended to remove the StructureScan (.sl2) files after conversion.

**Using StructureMap with mapping cards**

StructureMap allows you to maintain full chart capability and can be used with embedded cartography as well as Navionics, Insight and other third-party charting cards compatible with the system.

When using StructureMap with mapping cards, copy the StructureMap (.smf) files to the unit’s internal memory. We recommend keeping copies of StructureMap files on external mapping cards.
Structure options
You adjust the StructureMap settings from the Structure options menu. The menu is available when Structure overlay is enabled. Not all options are available when saved StructureMap files are used as the source. Unavailable options are greyed.

Range
Sets the search range.

Transparency
Sets the opaqueness of the Structure overlay. With minimum transparency settings, the chart details are almost hidden by the StructureMap overlay.

Palette
Selects Structure palette.

Contrast
Determines the brightness ratio between light and dark areas of the screen.

Water column
Shows/hides the water column in Live mode.
If turned OFF schools of bait fish might not be seen on the SideScan image.
If turned ON the accuracy of the SideScan image on the map might be affected by the water depth.

Frequency
Sets the transducer frequency used by the unit. 800 kHz offers the best resolution, while 455 kHz has greater depth and range coverage.

Clear live history
Clears existing live history data from the screen and begins showing only the most current data.
Log Sonar data
Records StructureScan data.

Source
Selects StructureMap source.
Info panels

The Info panels consist of multiple gauges - analog, digital, and bar - that can be customized to display selected data. The panel displays data on dashboards, and you can define up to ten dashboards within the panel.

Dashboards

A set of dashboard styles are predefined to display vessel, navigation, and angler information.

→ **Note:** Only the Navigation dashboard is available on the Elite-5Ti.

You switch between the panel’s dashboards by selecting the left and right arrow buttons on the panel. You can also select the dashboard from the menu.

→ **Note:** Additional dashboards can be activated from the menu if other systems are present on the network.

Customizing the Info panel

You can customize the Info panel by changing the data for each of the gauges in the dashboard, by changing the dashboard layout, and by adding new dashboards. You can also set limits for analog gauges.

All edit options are available from the Info panel menu. Available editing options depend on which data sources are connected to your system.
Edit a dashboard

Activate the dashboard you want to edit, then:

1. Activate the menu
2. Select the edit option
3. Select the gauge you want to change. Selected gauge is indicated with a colored background
4. Select information to be displayed, configure limits, and eventually change the source for the information
5. Save your changes by selecting the save option in the menu
Trolling motor autopilot

If a MotorGuide Xi5 trolling motor with Pinpoint GPS is connected to the NMEA 2000 network, then the SmartSteer (autopilot) functionality is available on all units except the ELITE-5Ti.

To use trolling motor autopilot functionality, you need the following:

- MotorGuide Xi5 trolling motor with Pinpoint GPS (available from MotorGuide)
- NMEA 2000 network

Connect the MotorGuide Pinpoint GPS Gateway to your NMEA 2000. For details about installing this equipment, refer to the separate installation manuals that come with the equipment.

The Autopilot can automatically control the trolling motor to:

- Maintain a set heading
- Maintain the vessel’s position
- Navigate to the cursor position, to a waypoint, or along a route
- Follow pre-defined turn patterns
- Control the speed of the trolling motor

→ Note: An autopilot is a useful navigational aid, but DOES NOT replace a human navigator.

Xi5 trolling motor software

If at any time there is an update required for your Xi5 trolling motor, instructions will be made available by MotorGuide, and posted on lowrance.com.

Follow the onscreen instructions to update Xi5 software.

Safe operation with the autopilot

⚠️ Warning: An autopilot is a useful navigational aid, but DOES NOT replace a human navigator.
Switching from automatic navigation to standby mode

To switch from autopilot to handheld remote or foot pedal steering, set the autopilot to standby mode. You can select standby mode from the **Autopilot Controller** or the **System Controls** dialog.

### Autopilot interface

![Autopilot interface diagram]

1. Autopilot information bar
2. Autopilot Controller

### The Autopilot Controller

The autopilot is controlled from the **Autopilot Controller**, activated from the **System Controls** dialog displayed by pressing the **Power** key.

You can select the position of the Autopilot Controller on the page. Refer to "**Autopilot settings**" on page 88.

⇒ **Note:** As long as the **Autopilot Controller** is active, you cannot operate the background panel or its menu.

The **Autopilot Controller** can also be set up as a panel in a split panel page by using the Page Editor to make a Favorite page. For
information about Favorite pages, refer to "Adding new favorite pages" on page 26.

The Autopilot information bar
The Autopilot information bar is displayed when an autopilot mode is selected. The bar includes information about the autopilot mode and navigational information. The bar is present on all pages if the autopilot is in an active mode. In the Autopilot settings dialog, you can select that the bar is off when the autopilot is in standby mode. Refer to "Autopilot settings" on page 88.

Autopilot control of the trolling motor

Selecting an Arrival mode
The autopilot switches from navigation mode to the selected arrival mode when your vessel reaches the destination. Arrival mode is set to Standby by default. Before starting a navigation mode or a turn pattern, it is important to select an arrival mode that fits your navigation needs. Refer to "Arrival mode" on page 88.

Anchor mode
Maintains your vessel position at a selected location.

→ Note: When in anchor mode, your vessel orientation can be affected by wind or currents.

The following occurs when you select to anchor at:

- **Waypoint**
  Enables anchor mode when your vessel arrives at a selected waypoint.

- **Cursor**
  Enables anchor mode when your vessel arrives at the cursor position.

- **Here**
  Enables anchor mode at your current location.
**Heading Lock mode**
Locks and maintains the current vessel heading. Use the left and right arrow buttons in the Autopilot Controller to make heading adjustments. To make small heading adjustments, single-select the left or right buttons. For larger adjustments, select and hold the left or right buttons.

**Standby mode**
Cancels autopilot activity and returns the vessel to handheld remote or foot pedal steering control.

**Turn pattern steering**
Steers the vessel in predefined turn patterns. When you select a turn pattern, the system creates temporary waypoints on the turn. The last waypoint on the turn is the final waypoint. When the vessel reaches the final waypoint, the vessel goes into arrival mode. Refer to "Arrival mode" on page 88.

Setting up a turn pattern
1. Select a turn pattern.
2. Enter the desired value(s) in the turn pattern dialog or use default settings.
3. Select the direction of the turn.

→ **Note:** Selecting a turn radius smaller than the GPS accuracy may result in incomplete navigation of the turn pattern.

**U-turn**
Changes the current set heading to be 180° in the opposite direction.

**C-turn**
Steers the vessel in a C-shaped pattern.

**Spiral turn**
Steers the vessel in a spiral with a decreasing or increasing radius. Negative values indicate decreasing radius while positive values indicate increasing radius.
Zigzag turns
Steers the vessel in a zigzag pattern.

Square turn
Makes the vessel automatically turn 90° after having travelled a defined leg distance.

Lazy S-turn
Makes the vessel yaw around the main heading.

**Navigation mode**
In Nav. mode you can use the autopilot to steer the boat to cursor position, to a waypoint position, or along a pre-defined route. The position information from the GPS is used to keep the boat on the track line towards the destination point.

When you start navigating from an application (chart, steering, etc) you are prompted to engage the autopilot in Nav. mode.

You can also initiate Nav. mode from the **Autopilot Controller** after navigation is started.

When you reach the destination, the autopilot switches to your **Arrival mode** setting. Refer to "**Autopilot settings**" on page 88.

**Trolling motor speed control**
In navigation modes (Heading lock mode, Nav. mode, and Turn pattern steering) there are two ways to control speed:

- Prop - selects a target propeller rate (percentage of power) shown as % in the Autopilot information bar.
• Cruise - selects a target cruise control speed shown as **mph**, **kn**, or **kph** in the Autopilot information bar.

→ **Note:** Cruise set speed sets the target speed for your vessel. Your vessel may not be able to achieve the set target. The Cruise set speed (not your current speed) is displayed in the Autopilot information bar.

**Speed adjustments**
You can make speed adjustments on the Heading lock and Navigation control dialogs by selecting the Spd up (+) and Spd down (-) buttons, or by selecting the **Set Spd** or **Set prop** option and entering your desired speed or propeller rate.

**Recording and converting a trail to a route**
The **Record trail** button is used to record and convert a trail or part of a trail to a route.

1. Select **Record trail** at the desired location to start recording a new trail.
2. Select **Save route** to select the end location of the route. The Edit trail dialog appears.
3. Select **Create route**. The Edit route dialog appears.
4. Enter the route details and save it.
**Autopilot settings**

Autopilot settings is applicable for all units except ELITE-5Ti.

![Autopilot settings menu](image)

**Chart compass**

You can select to show a compass symbol around your boat on the chart panel. The compass symbol is off when the cursor is active on the panel.

**Autopilot control location**

Controls the location of the Autopilot controller on the panel.

**Auto hide autopilot bar**

Controls whether the Autopilot information bar is shown when the autopilot is in Standby mode.

**Arrival mode**

The trolling motor autopilot switches from navigation mode to the selected arrival mode when your vessel reaches the destination.

→ **Note:** Before starting a navigation mode or a turn pattern, it is important to select an arrival mode that fits your navigation needs.

Arrival modes are:
• **Standby**
  Cancels autopilot activity and returns the vessel to handheld remote or foot pedal control.

• **Heading lock**
  Locks and maintains the last vessel heading.

• **Anchor**
  Anchors the vessel at the current destination.

→ **Note:** We recommend only using heading lock in open water.

**Anchor point setup**
Anchor points can be saved as a new waypoint, replaced with an existing waypoint, or set as your current coordinates.

Anchor points are synced with the Xi5 trolling motor. If any anchor points are stored in the motor, they appear in the anchor points list.
Wireless connection

GoFree wireless connectivity gives you the ability to:

- Use a wireless device to remotely view (smartphone and tablet) and control the system (tablet only).
- Access the GoFree Shop.
- Upload your Sonar logs to create custom maps at Insight Genesis.
- Download software updates
- Connect to third party applications

Note: Maps, charts, software updates, and other data files can be large. Your data provider may charge you based on the amount of data you transfer. If you are unsure contact the service provider for information.

The unit includes:

- Built-in wireless functionality for connecting to the internet and wireless devices such as smartphones and tablets.
- Built-in Bluetooth wireless technology.
  The built-in Bluetooth wireless technology gives you the ability to connect the unit to Bluetooth enabled devices. For more information, refer to “Bluetooth wireless technology” on page 93.

Connect and disconnect from a wireless hotspot

To connect to a wireless hotspot, select the Wireless option in the System Controls dialog and then select Not Connected. This opens the Wireless Devices dialog. Use this dialog to select the desired hotspot, enter the login information and then select Connect. Connecting to a wireless hotspot changes the wireless mode to Client mode. In this mode, you can access the GoFree Shop.

To disconnect from a wireless hotspot, select the Wireless option in the System Controls dialog, then select Connected hotspot_name, and then Disconnect. This changes the wireless mode to Access point mode. In this mode, you can connect a wireless device so that Apps
such as GoFree Controller & Viewer can access the vessel's navigation information.

**GoFree Shop**
The built-in wireless functionality must be connected to an external wireless hotspot in order to access the GoFree Shop.

At the GoFree Shop you can browse, purchase and download compatible content for your system including navigation charts and Insight Genesis Maps. When you log on, the system automatically gives you a notification if a new software version is available for your system. If an update is available, you can download it to a card slot or defer the download until later. If you defer the download until later, the notification is available in the About dialog accessible from the System Settings.

**GoFree Controller & Viewer**
The wireless functionality lets you use a wireless device to remotely view (smartphone and tablet) and control the system (tablet only). The system is viewed and controlled from the wireless device by the GoFree Controller & Viewer Apps downloaded from their relevant Application store. When remote control is accepted, the active page is mirrored to the wireless device.

- **Note:** To use smartphones and tablets to view and control the system, wireless functionality must be disconnected from the wireless hotspot (in Access point mode).

- **Note:** For safety reasons, Autopilot and CZone functions cannot be controlled from a wireless device.

**Connecting a tablet**
Install the GoFree App on the tablet before following this procedure.

1. Set the internal wireless to Access Point mode. To do this, select the Wireless devices page in the Wireless settings dialog and then select the Internal wireless. Next, select the Mode option and then select Internal Access Point.
2. Select the Internal Wireless device on the Wireless devices page to view its Network key.
3. Navigate to the wireless network connection page on the tablet, and find the unit or GoFree wireless **xxxx** network. If more than
one is in range, review the Wireless devices page on the unit to confirm which wireless device is connected to the unit.

4. Enter the Network Key in the tablet to connect to the network.

5. Open the GoFree application - the unit should be automatically detected. The name displayed will be either the default, or that assigned in the Device Name setting. If the unit does not appear, follow the on screen instructions to manually find the device.

6. Select the graphic icon of the unit. The unit displays a prompt similar to the following:

<table>
<thead>
<tr>
<th>Allow &quot;iPad&quot; remote MFD control?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
</tr>
<tr>
<td>No</td>
</tr>
<tr>
<td>Always</td>
</tr>
</tbody>
</table>

7. Select Yes for one-time connection, or Always if device is to be remembered for regular connection. This setting can be changed later if required.

**Note:** The internal wireless module only supports GoFree connection to itself. Other units connected on the network are not visible.

**Connecting a smartphone**

Install the GoFree App on the smartphone before following this procedure.

1. Set the internal wireless to Access Point mode. To do this, select the Wireless devices page in the Wireless settings dialog and then select the unit’s Internal Wireless. Next, select the Mode option and then select Internal Access Point.

2. Select the Internal Wireless device on the Wireless devices page to view its Network Key.

3. Navigate to the wireless network connection page on the smartphone, and find the unit or GoFree wireless xxx network. If more than one is in range, review the Wireless devices page from the unit’s Wireless settings dialog to confirm which wireless device is connected to the unit.

4. Enter the Network Key in the smartphone to connect to the network.

5. Open the GoFree application on the smartphone, the unit should be automatically detected. The name displayed will be either the default, or that assigned in the Device Name setting. If
the unit does not appear, follow the on screen instructions to manually find the device.

The MFD’s display is shown on the smartphone. To change the MFD’s display on the smartphone, use the MFD to change the display on the MFD. The display change on the MFD is reflected on the smartphone.

**Uploading log files to Insight Genesis**

To upload a recorded Sonar log file to Insight Genesis, select the file you want to upload from the Files panel and select the upload to Insight Genesis option.

→ **Note:** You must be connected to a wireless hotspot to upload recorded log files to Insight Genesis.

→ **Note:** Recorded log files can also be uploaded to Insight Genesis if you have specified **Upload to Insight Genesis** in the Log Sonar dialog. For more information, refer to "Start Recording log data" on page 61.

**Bluetooth wireless technology**

The ELITE Ti includes built-in Bluetooth wireless technology. To connect the ELITE Ti to Bluetooth enabled devices you must pair them.

**Pairing Bluetooth devices**

To pair the unit with a Bluetooth enabled device, do the following:

1. Turn on the Bluetooth enabled device so that it is able to send and receive Bluetooth signals.
2. Open the Wireless settings dialog in the ELITE Ti and turn on Bluetooth, if it is not already enabled.
3. Select **Bluetooth devices**. The system searches for Bluetooth enabled devices, and lists them in the Bluetooth Devices dialog.
Devices that are already paired are listed under **Paired Devices**. Devices that are not paired are listed under **Other Devices**.

4. Select the Bluetooth enabled device you want to *pair* with in the list under **Other Devices**. The **Bluetooth Device Details** dialog opens.

5. Select **Pair** to *pair* the ELITE Ti to the device.

6. Repeat these steps for each device you want to pair with the ELITE Ti.

**Pairing with dual Power-Poles**

If dual Power-Poles are installed on your boat, the one that is paired first automatically becomes **Port** and the second is set to **Starboard** in the Power-Pole controls.

To swap them around, unpair the connected Power-Poles. And then, toggle off and on **Bluetooth** in the Wireless settings dialog to reset the Bluetooth memory. Once Bluetooth has been toggled back on, proceed in pairing the Power-Poles in the correct order.

**Wireless settings**

Provides configuration and setup options for the wireless functionality.
**Connect to a wireless hotspot**
Displays the Wireless device dialog that you can use to connect the wireless functionality to a wireless hotspot.

**Remote controllers**
When a wireless device (smart phone or tablet) is connected, it should appear in the Remote controllers list. Selecting *Always allow* means the device can automatically connect without needing a password each time. This menu also allows you to disconnect devices that no longer require access.

**Wireless devices**

This dialog shows the internal wireless, its IP address and channel number. Select the Internal Wireless listed to view additional detail.
To view and change internal wireless detail values (Network Name (SSID), Network Key, or Channel) the internal wireless must be in **Access Point** (Internal Wifi) mode. To select a network (hotspot) to connect to, the internal wireless must be in **Client Mode**. Use the Mode option to change modes.

**Client settings**
Displays information about the wireless hotspot your unit is connected to or the last one your unit was connected to. You can select the hotspot in the dialog to set it as a hotspot you want to always connect to when in range or you can select to delete it.

**Advanced**
Initiates the Iperf and DHCP Probe tools that help in fault-finding and setting up the wireless network.

> **Note:** Iperf and DHCP Probe are tools provided for diagnostic purposes by users familiar with network terminology and configuration. Navico is not the original developer of these tools, and does not provide support related to their use.

**Bluetooth**
Enables the built-in Bluetooth wireless technology functionality.

**Bluetooth devices**
Displays the Bluetooth Device list dialog. Use the Bluetooth Device List dialog to pair or remove pairing to Bluetooth enabled devices.
AIS

Any AIS or NMEA 0183 VHF that can do AIS can be used by the ELITE-5Ti, if the AIS receiver can send and receive at the same NMEA 0183 baud rate. All units, except the ELITE-5Ti, can use any NMEA 2000 or NMEA 0183 AIS device.

AIS targets can be displayed as overlay on chart images, making this feature an important tool for safe travelling and collision avoidance. You can set alarms to notify you if an AIS target gets too close or if the target is lost.

AIS target symbols

The system uses the AIS target symbols shown below:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✅</td>
<td>Sleeping AIS target (not moving or at anchor).</td>
</tr>
<tr>
<td>🔧</td>
<td>Moving and safe AIS target with course extension line.</td>
</tr>
<tr>
<td>⚠️</td>
<td>Dangerous AIS target, illustrated with bold line. A target is defined as dangerous based on the CPA and TCPA settings. Refer to &quot;Defining dangerous vessels&quot; on page 103.</td>
</tr>
</tbody>
</table>
Lost AIS target.
When no signals have been received within a time limit, a target is defined as lost.
The target symbol represents the last valid position of the target before the reception of data was lost.

Selected AIS target, activated by selecting a target symbol.
The target returns to the default target symbol when the cursor is removed from the symbol.

**Searching for AIS items**
You can search for AIS targets by using the **Find** option in the Tools panel.
From a chart panel you can search for AIS targets by using the **Find** option in the menu. If the cursor is active, the system searches for vessels around the cursor position. Without an active cursor, the system searches for vessels around your vessel’s position.

### Find from vessel

<table>
<thead>
<tr>
<th>Waypoints</th>
<th>Chart Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>Routes</td>
<td>Vessels</td>
</tr>
<tr>
<td>Trails</td>
<td>Coordinates</td>
</tr>
</tbody>
</table>

**Viewing information about single AIS targets**
When you select an AIS icon on the chart panel the symbol changes to Selected target symbol, and the vessel’s name is displayed.
You can display detailed information for a target by selecting the AIS pop-up, or from the menu when the target is selected.
Calling an AIS vessel

If the system includes a VHF radio supporting DSC (Digital Select Calling) calls over NMEA 2000 (all units except ELITE-5Ti) or NMEA 0183 (all units), you can initiate a DSC call to other vessels from the unit.

The call option is available in the AIS Vessel Details dialog, and in the Vessel status dialog activated from the Tools panel.

From the Call dialog you can change channel or cancel the call. The Call dialog is closed when the connection is established.

AIS SART

When an AIS SART (Search and Rescue beacon) is activated, it starts transmitting its position and identification data. This data is received by your AIS device.

If your AIS receiver is not compliant with AIS SART, it interprets the received AIS SART data as a signal from a standard AIS transmitter. An icon is positioned on the chart, but this icon is an AIS vessel icon.
If your AIS receiver is compliant with AIS SART, the following takes place when AIS SART data is received:

- An AIS SART icon is located on the chart in the position received from the AIS SART.
- An alarm message is displayed.

If you have enabled the siren, the alarm message is followed by an audible alarm.

**Note:** The icon is green if the received AIS SART data is a test and not an active message.

### AIS SART alarm message

When data is received from an AIS SART, an alarm message is displayed. This message includes the AIS SART’s unique MMSI number, and its position, distance, and bearing from your vessel.

![Man Overboard](image)

You have the following options:

- Ignore the alarm
  - The alarm is muted and the message closed. The alarm does not reappear.

  **Note:** If you ignore the alarm, the AIS SART icon remains visible on your chart, and the AIS SART remains in the Vessels list.

- Save the waypoint
  - The waypoint is saved to your waypoint list. This waypoint name is prefixed with MOB AIS SART - followed by the unique MMSI number of the SART. For example, MOB AIS SART - 12345678.

- Activate the MOB function
  - The display switches to a zoomed chart panel, centered on the AIS SART position.
  - The system creates an active route to the AIS SART position.
→ **Note:** If the MOB function is already active, this will be terminated and replaced by the new route towards the AIS SART position!

→ **Note:** If the AIS stops receiving the AIS SART message, the AIS SART remains in the Vessels list for 10 minutes after it receives the last signal.

If you select the AIS SART icon on the chart panel, then you can see the AIS MOB details.

### Vessel alarms

You can define several alarms to alert you if a target shows up within predefined range limits, or if a previously identified target is lost.

![Alarms](image)

#### Dangerous vessel

Controls whether an alarm will be activated when a vessel comes within the predefined CPA or TCPA. Refer to "Defining dangerous vessels" on page 103.

#### AIS vessel lost

Sets the range for lost vessels. If a vessel is lost within the set range, an alarm occurs.
Note: The check box controls whether the alarm pop-up box is displayed and if the siren goes on. The CPA and TCPA define when a vessel is dangerous regardless of the enabled or disabled state.

Vessel message
Controls whether an alarm will be activated when a message is received from an AIS target.

Vessel settings

Your vessel’s MMSI number
You need to have your own MMSI (Maritime Mobile Service Identity) number entered in the system to receive addressed messages from AIS and DSC vessels.
It is also important to have the MMSI number entered to avoid seeing your own vessel as an AIS target on the chart.

Note: The Vessel message option in the alarm settings must be toggled on for any MMSI message to be displayed.

Icon filters
By default, all targets are shown on the panel if an AIS device is connected to the system.
You can select not to show any targets, or to filter the icons based on security settings, distance, and vessel speed.

![Icon Filters]

**Course extension lines**
You can set the length of the Course Over Ground (COG) extension lines for other AIS vessels. The length of the extension lines is either set as off, as a fixed distance, or to indicate the distance the vessel will move in the selected time period. If Off is selected, then no COG extension lines are shown for the vessel. For information about extension lines for your vessel, refer to “Extension lines” on page 44.

**Defining dangerous vessels**
You can define an invisible guard zone around your vessel. When a target comes within the set limits, the symbol changes to the Dangerous target symbol. An alarm is triggered if activated in the Alarm settings panel.

![Dangerous Vessels]
Alarms

Alarm system
The system continuously checks for dangerous situations and system faults while the system is running. When an alarm situation occurs, an alarm message pops up on the screen. If you have enabled the siren, the alarm message is followed by an audible alarm, and the switch for external alarm becomes active. The alarm is recorded in the alarm listing so that you can see the details and take the appropriate corrective action.

Type of messages
The messages are classified according to how the reported situation affects your vessel. The following color codes are used:

<table>
<thead>
<tr>
<th>Color</th>
<th>Importance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>Critical</td>
</tr>
<tr>
<td>Orange</td>
<td>Important</td>
</tr>
<tr>
<td>Yellow</td>
<td>Standard</td>
</tr>
<tr>
<td>Blue</td>
<td>Warning</td>
</tr>
<tr>
<td>Green</td>
<td>Light warning</td>
</tr>
</tbody>
</table>

Single alarms
A single alarm is displayed with the name of the alarm as the title, and with details for the alarm.

Multiple alarms
If more than one alarm is activated simultaneously, then the alarm message displays a list of up to 3 alarms. The alarms are listed in the order they occur with the alarm activated first at the top. The remaining alarms are available in the Alarms dialog.
Acknowledging a message

The following options are available in the alarm dialog for acknowledging a message:

- **Close**
  Sets the alarm state to acknowledged, meaning that you are aware of the alarm condition. The siren / buzzer stops and the alarm dialog is removed. However, the alarm remains active in the alarm listing until the reason for the alarm has been removed.

- **Disable**
  Disables the current alarm setting. The alarm does not show again unless you turn it back on in the Alarms dialog.

There is no time-out on the alarm message or siren. They remain until you acknowledge the alarm or until the reason for the alarm is removed.

Alarms dialog

All alarms are setup in the Alarms Settings dialog.

The alarm dialogs can also be activated from the Tools panel. The alarm dialogs include information about active alarms and alarm history.
Tools

By default, the Tools panel includes icons used for accessing options and tools that are not specific to any panel.

When external equipment is integrated to the unit, new icons might be added to the Tools panel. These icons are used for accessing the external equipment's features.

Waypoints/routes/trails
List of waypoints, routes, and trails with details.
Select the waypoint, route, or trail you want to edit or delete.

Tides
Displays tide information for the tide station nearest to your vessel.
Select the arrow panel buttons to change the date, or select the date field to access the calendar function.
Available tide stations can be selected from the menu.

Alarms

Active alarms
List of active alarms.

Alarm history
List of all alarms with time stamp.

Alarm settings
List of all available alarm options in the system, with current settings.

Settings
Provides access to application and system settings.

System settings
The system settings provides access to the following:

Language
Controls the language used on this unit for panels, menus, and dialogs. Changing the language causes the unit to restart.
Text size
Used for setting the text size in menus and dialogs.
Default setting: Normal

Key beeps
Controls the loudness of the beep sound when a key is pressed.
Default setting: Loud

Time
Controls the local time zone offset, and the format of the time and date.

Datum
If your paper charts are in a different format, you can change the datum settings accordingly to match your paper charts.

Coordinate system
Several coordinate systems can be used to control the format for latitude and longitude coordinates displayed on the chart panel.

Magnetic variation
Magnetic variation is the difference between true bearings and magnetic bearings, caused by different locations of the Geographic and the Magnetic north poles. Any local anomalies such as iron deposits might also affect the magnetic bearings.
When set to Auto, the system automatically converts magnetic north to true north. Select manual mode if you need to enter your own local magnetic variation.

Satellites
Status page for active satellites.
WAAS (and EGNOS) differential position correction can be configured to ON or OFF.

Restore defaults
Allows you to select which settings are to be restored to their original factory settings.
⚠️ **Warning:** If waypoints, routes, and trails are selected, they are permanently deleted.

**Advanced**
Shows a panel with more advanced settings. Used for setting how your system displays various user interface information. In addition, controls which features are shown in the interface.

**About**
Displays copyright information, software version, and technical information for this unit.

**Navigation**
Provides options and dialogs where you specify settings for your navigation, such as arrival radius, XTE limit, XTE Alarm, Trails, and Logging Type. Refer to "Navigation settings" on page 54.

**Chart**
Provides options and dialogs where you specify settings for your charts. Settings and display options made in the Chart settings page are common for all chart panels. Refer to "Chart settings" on page 43.

**Sonar**
Provides options and dialogs where you specify settings for your sonar. Refer to "Sonar settings" on page 66.

**Autopilot**
Provides options where you specify settings for your autopilot. Refer to "Autopilot settings" on page 88.

**Fuel**
Provides a dialog showing total fuel used, fuel used per trip, and fuel used per season. In addition, it provides access to configuration engine and tanks, and calibration of tanks (refuel) dialogs. Refer to the Installation Manual.
Alarms
Provides the option to enable the siren. It also provides a dialog where you specify turning on alarms for items, and includes active alarm information and alarm history.

Units
Provides setup of units of measure used on various data types.

Wireless
Provides dialogs where you set remote controllers, view wireless devices, and customize advanced settings. For more information about using this panel, refer to "Wireless settings" on page 94.

Network
Provides information about your network, settings options, and configuration options. For more information about using this panel, refer to the Installation Manual.

Vessels
Provides dialogs where you define your vessel’s MMSI, set icon filters, set course extension length, and specify dangerous vessels settings of closest point of approach and time to closest point of approach. For more information about using this panel, refer to "Vessel settings" on page 102.

Simulator
Provides for manually controlling the simulator. For more information, refer to "Simulator" on page 118.

Vessels
Status listing
List of all AIS and DSC vessels with available information.

Message listing
List of all messages received from other AIS vessels with time stamp.
**Sun, Moon**
Displays sunrise, sunset, moonrise and moonset for a position based on entered date and the position’s latitude/longitude.

**Trip calculator**

**Trip 1 / Trip 2**
Displays voyage and engine information, with reset option for all data fields.

**Today**
Displays voyage and engine information for current date. All data fields are automatically reset when the date changes.

**Files**
File management system for Files, Waypoints, Routes, Trails, and Settings.

**Viewing files**
Select a file in the Files panel and then the view file option in the Details dialog.

**Copying files to a card in the card reader**
You can copy screen captures and logs to a card in the card reader. You can also export System Settings, Waypoints, Routes, and Trails to a card. Exporting files is covered in the section "Maintenance" on page 113.

**Find**
Search function for chart items (waypoints, routes, trails, etc.).

**GoFree Shop**

→ **Note:** The built-in wireless functionality must be connected to an external wireless hotspot in order to access the GoFree Shop. Refer to "Connect and disconnect from a wireless hotspot" on page 90.

Opens the GoFree Shop web site. At the GoFree Shop you can browse, purchase, and download compatible charts for your system.
You can also upload your Sonar logs to be shared on Social Map charts. When you log on, the system automatically gives you a notification if a new software version is available for your system. If an update is available, you can download it to a card slot or defer the download until later.
Preventive maintenance
The unit does not contain any field serviceable components. Therefore, the operator is required to perform only a very limited amount of preventative maintenance.

Checking the connectors
The connectors should be checked by visual inspection only. Push the connector plugs into the connector. If the connector plugs are equipped with a lock, ensure that it is in the correct position.

Touchscreen calibration

→ **Note:** Ensure the screen is clean and dry before doing the calibration. Do not touch the screen unless prompted to do so.

In some cases it may be required to re-calibrate the touch screen. To re-calibrate your touchscreen, do the following:

1. Turn the unit off
2. Press and hold the **Waypoint** key, and turn the unit on
3. Continue to press in the **Waypoint** key during power on, until the calibration utility screen comes up
4. Follow the instructions on the screen to perform the calibration.

When completed, the unit returns to the application screen.

NMEA Data logging
All serial output sentences sent over the NMEA TCP connection are logged to an internal file. You can export and review this file for service and fault finding purposes.

The maximum file size is predefined. If you have added several other files to the system (file recordings, music, pictures, PDF files), this may reduce the allowed file size for the log file.

The system logs as much data as possible within the file size limitation, and then it starts overwriting the oldest data.

→ **Note:** NMEA 2000 is not available on the ELITE-5Ti.
Exporting the log file
The log file can be exported from the files dialog.
When you select the Log database you are prompted to select a destination folder and filename. Once accepted, the log file is written to the chosen location.

Software upgrades
The latest software is available for download from our website, www.lowrance.com.
Before initiating an update to the unit itself, be sure to back up any potentially valuable user data. Refer to "Backing up your system data" on page 115.
The update file must be loaded to the root directory of the memory card.
The update may be initiated at start up: insert the memory card into the card reader before turning the unit on, restart the unit, and follow the on-screen instructions.
Alternatively, in the Files menu, locate the update file on the memory card inserted in the card reader and select Upgrade, followed by This Display. Accept the prompt to restart the unit, and wait a few moments as the unit restarts. Do not remove the memory card or repower the unit until the process is completed (this typically takes no more than a couple of minutes).
Backing up your system data

Waypoints, Routes, and Trails that you create are filed in your system. It is recommended to regularly copy these files and your system settings files as part of your back-up routine. The files can be copied to a card inserted in the card reader.

There are no export file format options for the system settings file. The following output formats are available for exporting Waypoints, Routes, and Trails files:

- **User Data File version 5**
  This is used to import and export waypoints and routes with a standardized universally unique identifier (UUID), which is very reliable and easy to use. The data includes such information as the time and date when a route was created.

- **User Data File version 4**
  This is best used when transferring data from one system to another, since it contains all the extra bits of information these systems store about items.

- **User Data file version 3 (w/depth)**
  Should be used when transferring user data from one system to a legacy product (Lowrance LMS, LCX)

- **User data file version 2 (no depth)**
  Can be used when transferring user data from one system to a legacy product (Lowrance LMS, LCX)

- **GPX (GPS Exchange, no depth)**
  This is the format most used on the web that shares among most GPS systems in the world. Use this format if you are taking data to a competitors unit.

Export all Waypoints, Routes and Trails

Use the export option if you want to backup all Waypoints, Routes, and Trails on your system.
Export region

The export region option allows you to select the area from where you want to export data.

1. Select Export region
2. Drag the boundary box to define the desired region
3. Select the export option from the menu
4. Select the appropriate file format
5. Select the serial port field to start the export
Purging Waypoints, Routes and Trails

→ **Note:** When user data is purged from the memory, it cannot be recovered.
Simulator

The simulation feature lets you see how the unit works in a stationary position and without being connected to the Sonar, GPS, etc.

Use the simulator to become familiar with your unit before using it on the water.

Demo mode

In this mode the unit automatically runs through the main features of the product; it changes pages automatically, adjusts settings, opens menus, etc.

If you tap on a touchscreen or press a key when demo mode is running, the demonstration pauses. After a time-out period, demo mode resumes and any changed settings are restored to default.

→ **Note:** Demo mode is designed for retail/showroom demonstrations.

Simulator source files

You can select which data files are used by the simulator. A set of source files is included in your system, and you can import files by using a card inserted into the card reader. You can also use your own recorded log data files in the simulator.
Advanced simulator settings

The Advanced simulator settings allows for manually controlling the simulator.

GPS source

Selects where the GPS data is generated from.

Speed, Course and Route

Used for manually entering values when GPS source is set to Simulated course or Simulated route. Otherwise, GPS data including speed and course come from the selected source file.

Set start position

Moves your vessel to the current cursor position.

→ Note: This option is only available when the GPS source is set to Simulated course.
## Touchscreen operation

Basic touchscreen operation on the different panels is shown in the table below.

The panel sections in this manual have more information about panel specific touchscreen operation.

<table>
<thead>
<tr>
